Research Data Management Plan

Project Title

HAiSP: Sprint Planning for Human-AI Agile Teams

ReDBox Project ID

RB03729

Description

This study evaluates the HAI SP platform, a multi-agent system that enables human developers and AI agents to jointly conduct Agile sprint planning. We first validate the platform's automated prioritisation consensus and task assignment algorithms through fully autonomous agent-only sessions. We then recruit 15–20 experienced software practitioners to participate in mixed human-agent sprint planning sessions online, completing a post-session questionnaire grounded in the Technology Acceptance Model (TAM) to measure perceived usefulness, ease of use, and adoption intention. Expected outcomes include technical feasibility evidence for automated multi-agent sprint planning and empirical data on practitioner perceptions of AI agents as collaborative planning partners. Results will inform the design of AI-native Agile workflows and contribute algorithm designs to the emerging field of human-AI collaborative software engineering.

- Ethics

Human Ethics Protocol Number (if available)

H2026-0234

Compliance - Security of Critical Infrastructure Classification (SOCI) and Data Security Classification

Is the data in this research project critical to one or more of the following?

SOCI Classification

- Sector - Not Applicable

Please assign an appropriate security classification to your data

Data Security Classification

Official

- Data Management During the Study

Describe the new data that your project will create?

The study will create new quantitative & qualitative data from survey and data related to sprint planning sessions.

Are you using any existing data? E.g. From a previous project or third party?

No

If yes, please specify the source, including the name of the databank if appropriate, and list the data items that will be accessed

The TAWOS Dataset (V. 1.1)

Will it be possible to identify or re-identify individuals from any of the data being collected or used?

Yes

Will potentially identifying information be removed from the data during the study or prior to publication of the dataset or other project outputs?

No

For each data type, please provide the following details:

Data Type eg. Videos (audio and visual), Interview scripts, Transcripts

For pre-existing data from another source, will the de-identification be completed before the records are provided to the researcher?

How will the information be de-identified?

When

By Whom

For each data type, please provide details of the storage option/s for the data during the study:

Data Type eg. Videos (audio and visual), Interview scripts, Transcripts

Questionnaire

Storage Option

Survey Platform (e.g. Redcap, Qualtrics etc.)

How will the data be regularly backed up during the study?

The Student Researcher will perform a regular manual export of all response data (in .CSV) throughout the data collection phase. These exports will be saved to the University of Wollongong's secure OneDrive for backup.

Data Type eg. Videos (audio and visual), Interview scripts, Transcripts

Raw sprint planning data

Storage Option

MS Teams

How will the data be regularly backed up during the study?

The Student Researcher will perform a regular manual export of all data (in .CSV) throughout the data collection phase. These exports will be saved to the University of Wollongong's secure OneDrive for backup.

Please provide details of the security arrangements in place for storage and transfer of the data from the point of collection to completion of the study.

Once the backup is done, the original data will be permanently deleted.

- Post Study Data Retention and Disposal

For each data type, please specify all data format/s and storage locations which will be utilised after the study (data collection/analysis/publication) is completed. For digital storage the location of the server should be included.

Data Type

Qualtrics Survey Data

Format

csv

Storage Option

MS Teams

What security arrangements will be in place?

Data will be securely stored on University of Wollongong's OneDrive.

How long will the digital data be stored?

5 years (general research)

How will the digital data be securely disposed of?

All the digital data, including all backups, will be permanently erased once the agreed time arrives. All trash/bins on the cloud facility will be emptied to ensure nothing will be restored.

How long does your non-digital data need to be stored?

How will your non-digital data be securely disposed of?

- Data Ownership, Access and Sharing

Who will own the data?

The University of Wollongong.

Will data ownership remain the same during and after the study?

Yes

Who will have access to the data during the research? Please specify individuals and/or categories of people who will have access.

Access is strictly restricted to the Principal Investigator (Prof. Hoa Khanh Dam) and the Student Researcher (Thanh-Long Bui).

How will this access be managed (e.g. through a formal process with a custodian or a password protected shared drive)? Please provide details.

Access is managed via University of Wollongong user credentials requiring Two-Factor Authentication (2FA). The data resides in a restricted-access folder on the University's secure cloud storage (OneDrive/RDS), accessible only to the specific user accounts of the research team.

Who will have access to the data on completion of the research and how will this access be managed (e.g. through a formal process with a custodian or a password protected shared drive)? Please provide details.

The Principal Investigator (as the Data Custodian) and the Student Researcher. The data will be archived in the University's secure long-term storage system. Access will continue to be managed via UOW credentials and 2FA, ensuring no unauthorised access occurs during the 5-year retention period.

Will any part of the data be published or retained for use in other research projects in the future?

No

Name of databank:

Form in which data will be stored (identifiable/re-identifiable/non-identifiable):

Purposes for which data will be used or disclosed:

How access is managed:

Restrictions on use of data:

Data Custodian's name:

Position:

Organisation:

If Yes,

What data will be shared/published/archived and in what form (individually identifiable/re-identifiable/non-identifiable)?

On what condition/s will this data be shared?

What arrangements will be in place to ensure that privacy and confidentiality of the data is maintained?

What information from this Research Data Management Plan will be communicated to potential participants, and how will this be done?

Participants will be informed of the storage location (UOW secure servers), the retention period (5 years), confidentiality measures (who has access), and the de-identification process. This information is explicitly detailed in the Participant Information Sheet (PIS) provided to all participants prior to consent.

- Researcher Acknowledgement

The National Statement on Ethical Conduct in Human Research states:

"When multiple researchers are collaborating on collection, storage and/or analysis of data or information, they should agree to the arrangements for custodianship, storage, retention and destruction of those materials, as well as to rights of access, rights to analyse/use and re-use the data or information and the right to produce research outputs based upon them. Researchers should consider whether any intellectual property will be generated by the project and agree on the ownership of any intellectual property created. Agreements on such arrangements and ownership need not necessarily be in the form of a contractual document, but should facilitate a clear resolution of these issues" (NS 3.1.44).

Are all involved researchers in agreeance with the terms of IP/data ownership, storage, retention, destruction, rights of access, rights to analyse/use and re-use the data or information and the right to produce research outputs based upon them, as outlined in this Research Data Management Plan?

Yes
